

User Manual - Client Management

Practical guide for using client records, tabs, payments, attachments and indicators.

Ramo	Client Management
Destinatários	Administrators, staff and authorised users
Repositório	https://github.com/MenteMovimento/central-mente-movimento
Site	https://central-mente-movimento.vercel.app
Atualização	23/07/2026

1. Central access

Central MenteMovimento uses one sign-in for members, clients, cybersecurity and activities. After signing in, choose the working area from the dashboard or the top navigation.

- Use an authorised email and password.
- Remember credentials only on trusted browsers.
- Use Sign out when leaving a shared computer.
- User management, language and dark mode are global dashboard tools.

2. Client list and records

- Search by name to find a client.
- Use the eye button for read-only view.
- Use the pencil button to edit.
- Use active/inactive instead of deleting when a client may return.
- Delete only when authorised and after confirming that the record is no longer needed.

3. Record tabs

- Referral Form: identification, contacts and initial context.
- Payments and Monthly Fees: paid month, payment date, method, status and notes.
- Emergency Information: priority contacts and safety information.
- Registration and Initial Requirements Assessment: eligibility, consent and requirements.
- Multidisciplinary Diagnostic Assessment: technical assessment by area.
- Appointments and Follow-up Records: sessions, evolution and notes.
- Individual Intervention Plan: sensitive case managers, CIFsm, objectives, assessment, activities, dates and expandable technical observations.
- Data Protection and Responsibility Terms: authorisations and declarations.

4. Diagrams, attachments and indicators

- Genogram and ecomap nodes must keep names or identifiers visible.
- PDF attachments belong only to the selected client.
- Indicators show average permanence and percentage by municipality when data exists.
- Changing the interface language does not translate names, notes or clinical text already entered.

5. Client backup

The client backup downloads a ZIP file with CSV copies and supporting files. The button is visible only to accounts allowed to export and view sensitive data.

- 1 Sign in to Client Management with an authorised account.
- 2 On the main client list, choose Export clients backup.
- 3 Save the backup-utentes-YYYY-MM-DD_HH-MM-SS.zip file in a protected folder named with the date.
- 4 Open the ZIP and check indice.csv, which summarises the exported clients.
- 5 For each client, use pagamentos.csv and historico.csv when payment or history data is needed in CSV format.

- 6 Keep the ZIP only in authorised locations because it may contain personal data, health information, history and attachments.

6. Data protection

- Do not store passwords, Supabase keys or access data in client notes.
- Avoid sharing screenshots with personal or health data.
- Use history to audit record changes.
- Handle clinical and social information with additional care.

Recommended daily procedure

- 1 Sign in to Central MenteMovimento and confirm that the active area is Client Management.
- 2 Search before creating new clients, to avoid duplicates.
- 3 Open the existing record and confirm the main details before editing.
- 4 Save changes and confirm that the list loads again correctly.
- 5 Use the area history to review relevant changes.
- 6 Sign out when leaving a shared computer.

Validation before saving

- Confirm names, contacts and identifiers before saving.
- Avoid unclear abbreviations in operational notes.
- Do not store passwords, technical keys or access details in notes.
- Use the date format expected by each field.
- If something looks wrong after saving, check history before repeating the operation.

Permissions and support

- Global user management belongs on the dashboard menu.
- Each person should use their own account.
- Screenshots sent for support must not expose sensitive personal or health data.
- If a permission error appears, ask an administrator to confirm the user's profile.
- If a page does not load, refresh with Ctrl+F5 and try again before reporting the issue.
